## Without Regret: The Comprehensive Nature of Non-domination

*John W. Maynor*

In this article I examine Rawls's claim that there is no fundamental opposition between political liberalism and republicanism. I contend that Rawls's position is untenable in light of the necessary values and virtues that must accompany republican liberty as non-domination. Furthermore, I examine the 'regret' Rawls has toward some of the 'political virtues' of his approach and argue that if republicans were to have the same attitude, republican liberty as non-domination would be undermined. I conclude that republicanism is likely to be accompanied by values and virtues that affect the whole of an individual's life and therefore can be said to be a comprehensive doctrine.

## Without Regret: The Comprehensive Nature of Non-domination

John W. Maynor

In this article I examine Rawls's claim that there is no fundamental opposition between political liberalism and republicanism. I contend that Rawls's position is untenable in light of the necessary values and virtues that must accompany republican liberty as non-domination. Furthermore, I examine the 'regret' Rawls has toward some of the 'political virtues' of his approach and argue that if republicans were to have the same 'liberty as non-domination' would be accompanied by 'virtues' to be accompanied by 'virtues' in an individual's life and therefore, the doctrine.

เชื่อมโยงแหล่งอ้างอิงในบทความ

A striking feature of John Rawls's political liberalism is his surprising contention that his theory of 'justice as fairness as a form of political liberalism' is compatible with classical republicanism (Rawls, 1996, p. 205).<sup>1</sup> Rawls is careful, however, to draw a firm line between republicanism and what he calls civic humanism. For Rawls, civic humanism is that strain of thought, often associated with forms of Aristotelianism, which maintains that individuals are social or political beings whose essence is only fully realised in democratic societies that have widespread political participation. This participation in the democratic process is seen by Rawls as a form of the good life itself and is thus

## The influence of ammonia and carbon dioxide on the sorption of a basic organic pollutant to a mineral surface

**Abstract** Indoor surfaces have a sorptive capacity for organic pollutants which may be significantly influenced by other gases and the pH of the surface. In this research, we examine the influence of a common indoor gaseous acid, CO<sub>2</sub>, and base, NH<sub>3</sub>, on the adsorption of a volatile organic base, trimethylamine (TMA), to a mineral surface, zirconium silicate beads. Varying ammonia and CO<sub>2</sub> within concentration ranges of indoor relevance substantially influences the sorptive capacity of this mineral surface. Increasing the CO<sub>2</sub> mixing ratio to 1000 p.p.m. enhances surface capacity of TMA by 40–50%; increasing the NH<sub>3</sub> mixing ratio to 10 p.p.m. decreases the TMA surface capacity by ~5–80% depending on relative humidity. The phenomena of dissolution of TMA into bulk surface water and acid-base chemistry in the surface water do not adequately describe equilibrium adsorption on this surface. Instead, adsorption to the dry solid or to adsorbed water layers appears to dominate. Reduction in the equilibrium partition coefficient,  $k_e$ , in the presence of NH<sub>3</sub> is due to a competition between TMA and ammonia molecules for adsorption sites. Site competition appears to follow the Langmuir competitive model and most  $k_e$  values range from 0.003–0.045 m.

**Practical Implications**  
Sorptive interactions with indoor surfaces strongly influence indoor exposure to pollutants. For basic or acidic compounds, these interactions are themselves influenced by surface pH and competition with other acidic or basic
