The development of management science (MS) in China has been a long and dynamic journey involving many unexpected events. Beginning in 1955 and continuing through the present, the revolution roughly consisted of four stages. The first stage (1955-1965) was characterized by large-scale campaigns. Critical path method (CPM) and optimum seeking method swept the country resulting in astonishing economic efficiencies. (Dando, England, & Ford-Dunn, 2009; Gottipolu, Wallenborn, & Karoly, 2009)
