

SCOPUS PRODUCT UPDATES

wouldn't you?

SCOPUSTM
Find out.

Expanding the scientific desktop

- ✓ Primary Source full text articles
- ✓ Over 7 million articles
- ✓ More than 1,800 journals

- ✓ Science focused web search engine
- ✓ More than 200m science related pages

SCIRUS
www.scirus.com

SCOPUS

- ✓ Navigation of global scientific information
- ✓ Covers > 14,000 journals of > 4,000 publishers

What is Scopus?

SCOPUS™

- ✓ 14,000 titles from more than 4,000 publishers
- ✓ 80% of peer-reviewed literature
- ✓ Citation and reference searching/browsing across >26 million abstracts and 10 years of references
- ✓ The shortest way to full text – 2 clicks
- ✓ Federated searching: web and local sources
- ✓ Citation Analysis

Links via citation

Current Article

The screenshot shows the SCOPUS interface for the article "Role of polycystins in renal tubulogenesis" by Buletta, A., and Germino, G.G. The article title is highlighted in a blue box. Below the title, the abstract is visible. A red box highlights the "References (76)" section, which lists a citation: "1. Gabow, P.A. Autosomal dominant polycystic kidney disease (1993) *New Engl. J. Med.* 329 pp. 332-342 Cited 18 times (Abstract - Refs) View at Publisher".

A stack of three SCOPUS article pages, with the top page showing a list of articles that cite the current article. This represents forward citations.

Forward Citation (Cited by)

Done Internet

"The notification that there are new citing documents keeps me up to date on relevant articles for my research"

Integrated Scopus/RefWorks features

- This live interaction with a bibliographic tool has never been achieved before.
- Collecting, storing, organizing and creating bibliographies is now easier than ever before!
- The convenience of this real-time interaction means that researchers:
 - Don't have to remember which articles have already been identified
 - Have no need to exit/enter different product
 - Can find the new relevant research to build upon
 - Are prompted to find any new relevant stuff
 - **Can save even more time!**

Linking & Library Integration

D'Urso

Stereolithographic anatomical modelling process

Abstract

A method for stereolithographic construction of models including prostheses and anatomical pathology wherein CT scan data is computed to create two dimensional cross sectional images along one axis and the two dimensional image data is computed to create three dimensional cross sectional images along two axes. The three dimensional data sets are then computed to obtain spaced parallel two dimensional image data sets in three dimensions and the reconstructed two dimensional image data sets are employed in a stereolithographic modelling apparatus to produce a three dimensional model or part thereof. A prosthetic implant shaped to correct a defect in an anatomical part as well as a method for surgically implanting the prosthetic implant using the stereolithographic method is also disclosed.

Inventors: **D'Urso; Paul Steven** (Coorparoo, AU)
Assignee: **The University of Queensland** (St. Lucia, AU)

SCOPUS & DISCOVERYGATE /CROSSFIRE COMMANDER LINKING

Good news for chemists...

- **Product integration:**
 - **Bridging the gap between text search and structure search**
 - **Scopus–Crossfire Commander**
 - **Scopus–Discovery Gate (available in August)**
- **Users with both products can:**
 - **Display chemical compounds and reactions within Scopus**
 - **Search for compounds in Scopus**

Emergence of multiple-antibiotic-resistant *Streptococcus pneumoniae* in Hong Kong

[Kai Man Kam](#), [Kit Yee Luey](#), [Sze Man Fung](#), [Pik Pu Yiu](#), [Harden, T.J.](#), [May Hay Cheung](#)

Department of Health, Institute of Pathology, Gai Ying Pun Polyclinic, **Hong Kong**, Hong Kong

Abstract

Two hundred four strains of *Streptococcus pneumoniae* isolated in **Hong Kong** from January 1993 to May 1995 were analyzed for their antibiotic susceptibilities and epidemiological patterns. The ages of the patients from whom the strains were isolated ranged from 1 month to 93 years (median, 53 years); the male-to-female ratio was 2.8, with a predominance of males in the pediatric group. Fifty-nine (28.9%) strains showed reduced penicillin susceptibility, including 40 (19.6%) with frank penicillin resistance (MIC > 1 µg/ml). Tetracycline resistance alone was found in 28.4% of strains. Isolates with reduced penicillin susceptibility were more common in children than adults (40 versus 23.9%; P = 0.02), and penicillin resistance rates were significantly higher in hospitalized patients than in outpatients (39.5 versus 12.5%; P < 0.001). Penicillin resistance was significantly associated with resistance to ceftriaxone, erythromycin, and tetracycline (P < 0.01) but not with ofloxacin or vancomycin (P = 0.5). Among eight different patterns of resistance to three or more antibiotics, the commonest one (14.2%) was multiple resistance to penicillin, chloramphenicol, ceftriaxone, erythromycin, and tetracycline. **Emergence of multiple-antibiotic-resistant *S. pneumoniae*** reflects recent changes in the pneumococcus itself and the general indiscriminate use of antibiotics in treatment of respiratory infections in **Hong Kong**.

Matched Index Keywords:

antibiotic resistance; streptococcus infection; Drug Resistance, Multiple

Substance Identification

Beilstein Registry Number **5693143**
 CAS Registry Number 73384-59-5, 92143-31-2
 Chemical Name ceftriaxone
 Autaname 7-[2-(2-amino-thiazol-4-yl)-2-methoxyimino-acetylamino]-3-(6-hydroxy-2-methyl-5-oxo-2,5-dihydro-[1,2,4]triazin-3-ylsulfanylmethyl)-8-oxo-5-thia-1-aza-bicyclo[4.2.0]oct-2-ene-2-carboxylic acid
 Molecular Formula C₁₈H₁₈N₆O₇S₃
 Molecular Weight 554.57
 Lawson Number 31717, 31716, 30181, 3633, 289
 Structure Keyword Stereo compound
 Type of Substance heterocyclic
 Constitution ID 5011399
 Tautomer ID 5430807
 Beilstein Reference 6-27

BRN=5693143
